Full-Stack Software Engineer and MSc Data Science student at Arden University Berlin with a 4-year Computer Science background. Combines 2+ years of hands-on full-stack development (React, TypeScript, Node.js, Python) with expertise in predictive algorithms, data modeling, and AI-native development workflows (daily Claude Code and OpenAI APIs). Proven track record of architecting scalable SaaS platforms, automated business intelligence tools, and custom web systems.

EDUCATION

05/2026 – 05/2027 Berlin, Germany	Arden University <i>MSc in Data Science</i> • Focus on Machine Learning, Advanced Statistical Modeling, Predictive Analytics, Big Data Architectures.
07/2019 – 12/2023 Lalitpur, Kathmandu	Vedas College <i>BSc Computer Science and Information Technology</i> • 4-year degree covering Data Structures, Algorithms, Relational Databases, Object-Oriented Design, and Software Engineering.

PROFESSIONAL EXPERIENCE

05/2024 – 12/2024 Kathmandu, Nepal	Self-Employed <i>Freelance Web Developer & Designer</i> • Built end-to-end web applications and custom client architectures, integrating responsive frontends with robust backend data pipelines. • Designed relational schemas, executed query optimizations, and implemented event-tracking telemetry to analyze user conversion funnels. • Performed technical SEO audits, dynamic metadata injection, and performance optimizations (caching, asset minification), cutting load times by 60%+. • Managed direct stakeholder communication, requirements gathering, and cloud hosting deployments with automated backup routines.
09/2023 – 03/2024 Kathmandu, Nepal	Wildstone Solutions Pvt. Ltd. <i>Web Developer</i> • Developed responsive, scalable web applications for e-commerce, travel, and corporate clients, integrating third-party REST APIs and payment gateways. • Structured product catalog databases, inventory management flows, and custom transactional email notifications. • Translated Figma UI wireframes into performant, accessible code and deployed caching plugins (WP Super Cache) to optimize Core Web Vitals.

SKILLS

- Full-Stack & Languages: TypeScript, JavaScript (ES6+), React 18, Next.js, Node.js, Express 5, Python, PHP
- Data Science & AI: OpenAI API, Claude Code, Prompt Engineering, pandas, NumPy, scikit-learn, Matplotlib
- Databases & ORM: PostgreSQL, Prisma ORM, MySQL, Supabase, Firebase Firestore, RESTful APIs, GraphQL
- Security & Architecture: OAuth 2.0, JWT, Zod Validation, CSRF Protection, Rate Limiting, Cloud Deployments
- DevOps & Tooling: Git, GitHub (CI/CD), Vercel, Render, Cloudflare, Postman, Linux/Bash, Figma

PROJECTS

Centsible – Full-Stack SaaS Financial Analytics Platform [🔗](#)

Technologies: React 18, Vite, Node.js, Express 5, PostgreSQL, Prisma ORM, Supabase, Tailwind CSS

- Architected an end-to-end multi-cloud SaaS application deployed across Vercel, Render, and Supabase.
- Engineered a 3-month Simple Moving Average (SMA) predictive algorithm to forecast monthly expense trends.
- Designed interactive financial intelligence dashboards using Recharts (category donut breakdowns and expense bars).
- Implemented dual-mode auth (OAuth 2.0 + JWT) with HTTP-only cookie sync, Zod runtime validation, and brute-force rate limiting.

OrderFlow – Restaurant POS & Operations Analytics System [🔗](#)

Technologies: Next.js, TypeScript, Firebase Firestore, Tailwind CSS

- Developed a real-time point-of-sale and kitchen workflow management system actively powering daily operations for a café.
- Engineered automated sales data aggregation and daily revenue reporting pipelines for business stakeholders.
- Built live order state synchronization with WebSocket-like listeners and role-based staff access controls.

Luxy AI – Voice-Controlled Desktop Assistant & Tool Calling [🔗](#)

Technologies: Python, OpenAI GPT API, SpeechRecognition, pyttsx3, REST APIs

- Engineered a desktop voice agent in Python integrating OpenAI GPT APIs for natural language conversational reasoning.
- Implemented automated live news and information retrieval by executing external REST API tool calls.
- Integrated Speech-to-Text (STT) and natural Text-to-Speech (TTS) audio feedback loops for hands-free desktop control.

Berlin Housing Analytics & Price Prediction Model [🔗](#)

Technologies: Python, pandas, NumPy, scikit-learn, Matplotlib, Seaborn

- Performed exploratory data analysis (EDA), data cleaning, and feature engineering on Berlin rental market datasets.
- Implemented linear regression and machine learning models to identify key pricing factors across city districts.
- Visualized rental price distributions, square-meter metrics, and district heatmaps using Matplotlib and Seaborn.

Arcline Studio – Custom WordPress Theme from Scratch [🔗](#)

Technologies: WordPress, PHP, Advanced Custom Fields (ACF), HTML5, CSS3, JavaScript

- Built a fully bespoke WordPress theme from scratch without bloated page builders or third-party CSS frameworks.
- Implemented custom template hierarchy, Advanced Custom Fields (ACF), and relational custom post types.
- Hardened application security using CSRF nonces, server-side input sanitization, and custom SMTP email routing.
- Reduced HTTP requests by 60%+ through asset minification; achieved sub-150ms page load speeds via caching.

NepalWander – Headless WordPress Travel Platform [🔗](#)

- Architected a headless CMS setup using WordPress on Pantheon as a backend serving WPGraphQL queries to Next.js.
- Implemented Incremental Static Regeneration (ISR) and dynamic routing for instant sub-second page loads.
- Integrated interactive OpenStreetMap/Leaflet maps and automated Mailchimp API newsletter subscriptions.

LANGUAGES & AVAILABILITY

- Languages: English (Fluent), German (A2, attending B1 classes)
- Availability: 20 hrs/week during the semester (Mon–Wed + Sat)
